

# Magic Dragon - Theme Repair

Upon initial installation and run of Magic Dragon some systems will lose their Theme settings. This is caused by a Keylogger that can be found in the sp1 and sp2 versions of the theme files. Magic Dragon removes these files to secure your system. If this occurs don't worry we have included a solution to the problem in your Magic Dragon installation.

Simply follow these instructions to repair your themes.

1. Go to [Start][All Programs][magic Dragon]
2. Click on theme Repair utility
3. Follow any onscreen instructions that may appear in the black screen
4. If windows warns that windows files have been changed and it wants you to insert your windows disc. **DO NOT PUT WINDOWS DISC IN.** instead click cancel then select yes you want to keep the new files.
5. Restart your computer when repair utility has finished
6. Right click on the desktop and select properties
7. Click the appearance tab.
8. Select your new theme
9. Click ok

That's it your themes should be fixed and you shouldn't have the problem again unless you reinstall windows without sp3.

Windows sp3 attempts to repair this file and installs a new version. Our version of uxtheme is unlocked to allow you to install and use themes and styles that can be downloaded from the net. If you install sp3 and it doesn't allow the use of these downloads running this utility should fix the problem.
